

From Giant Wind Turbines to Electric Planes

In what's been termed the "three-third world", one third of global electricity in 2040 will be generated by wind and solar, one third of the vehicles on the road will be electric and the world's economy will be one third more energy efficient.

But how do we transition to this future? What sort of policy settings will be required? And how will new initiatives like the Zero Carbon Bill help New Zealand's contribution towards these goals?

International renewable energy and green finance expert Michael Liebreich will address these questions - and many more - in a public lecture at Victoria University of Wellington. He will then be joined by the University's Chair in Sustainable Energy Systems Professor Alan Brent for a question-and-answer session.

Hosted by Victoria University of Wellington and sponsored by Z Energy.

Michael Liebreich is Chairman and CEO of Liebreich Associates, providing advisory services on clean energy and transportation, smart infrastructure, technology, climate finance and sustainable development.

He is the Founder and Senior Contributor at Bloomberg New Energy Finance. Michael sits on a number of advisory boards including the OECD Centre on Green Finance. He is also a former Board Member of Transport for London and a former member of the high-level advisory group for the UN Secretary General's Sustainable Energy for All initiative, and the advisory board of the Clinton Global Initiative Energy and Climate Change Working Group.

Professor Alan Brent holds the Chair in Sustainable Energy Systems at Victoria University of Wellington.

The Chair was established in July 2017. It is aligned with the strategic sustainability focus at Victoria, to meet current and future challenges, by taking an inter-disciplinary approach, and engaging with partners across society in trans-disciplinary ways.

Public Lecture

When:

5pm – 6pm
Thursday 20 June

Where:

Lecture Theatre 1
Victoria Business School
Rutherford House,
23 Lambton Quay
